Before submitting your reports, make sure you check the guidelines in /Documents & Guides and the additional requirements here stated.

Additional Guidelines for Submitting Homework and Lab Reports in Fluid Mechanics

1. Meaningful Section Headings:

- Divide your assignment into sections based on the problem or topic.
- Use subheadings when necessary to further organize content.

2. Correct Use of Section Headings:

- Place relevant content under the appropriate section.
- Ensure that the sections follow a logical order, such as problem-solving steps or theoretical background first, followed by solutions or calculations.

3. Figure Labels and Descriptions:

- Label all figures and diagrams clearly.
- Provide concise and informative captions or descriptions for each figure.
- Ensure that figures are referenced within the text where appropriate.

4. Units:

- Always include units for all numerical values.
- Use SI units (e.g., meters, kilograms, seconds) unless otherwise specified.
- Double-check conversions if multiple unit systems are involved.

5. Showing All Work:

- Show all relevant steps in your calculations, even if they seem basic.
- Clearly explain the equations, principles, or theories used in each step.
- Use proper mathematical notation and symbols.
- Include intermediate results and units in calculations.
- Highlight the final answer.

6. Neatness and Clarity:

- Ensure your handwriting or typing is legible.
- Use clean and well-structured diagrams.
- Keep the layout organized and easy to follow.

7. References:

- If you consulted textbooks, articles, or online resources, cite them properly.

8. Submission Format:

- Submit your homework in a PDF format, ensure your document is in one single file.

9. Proofreading:

- Carefully proofread your work for spelling, grammar, and typographical errors.
- Check that your solutions are logically sound and well-explained.

10. On-Time Submission:

- Submit your homework on or before the due date.
- Keep backups of your work in case of technical issues.
